SPIRIVA GENERIC DEVICE OVERVIEW

THE UNIT is a capsule Dry Powder Inhaler similar in size and shape to the Spiriva Handihaler device. The lid unclips away to uncover the mouthpiece.

The device sides unclip and the unit hinges open like a shell to disclose the capsule chamber.

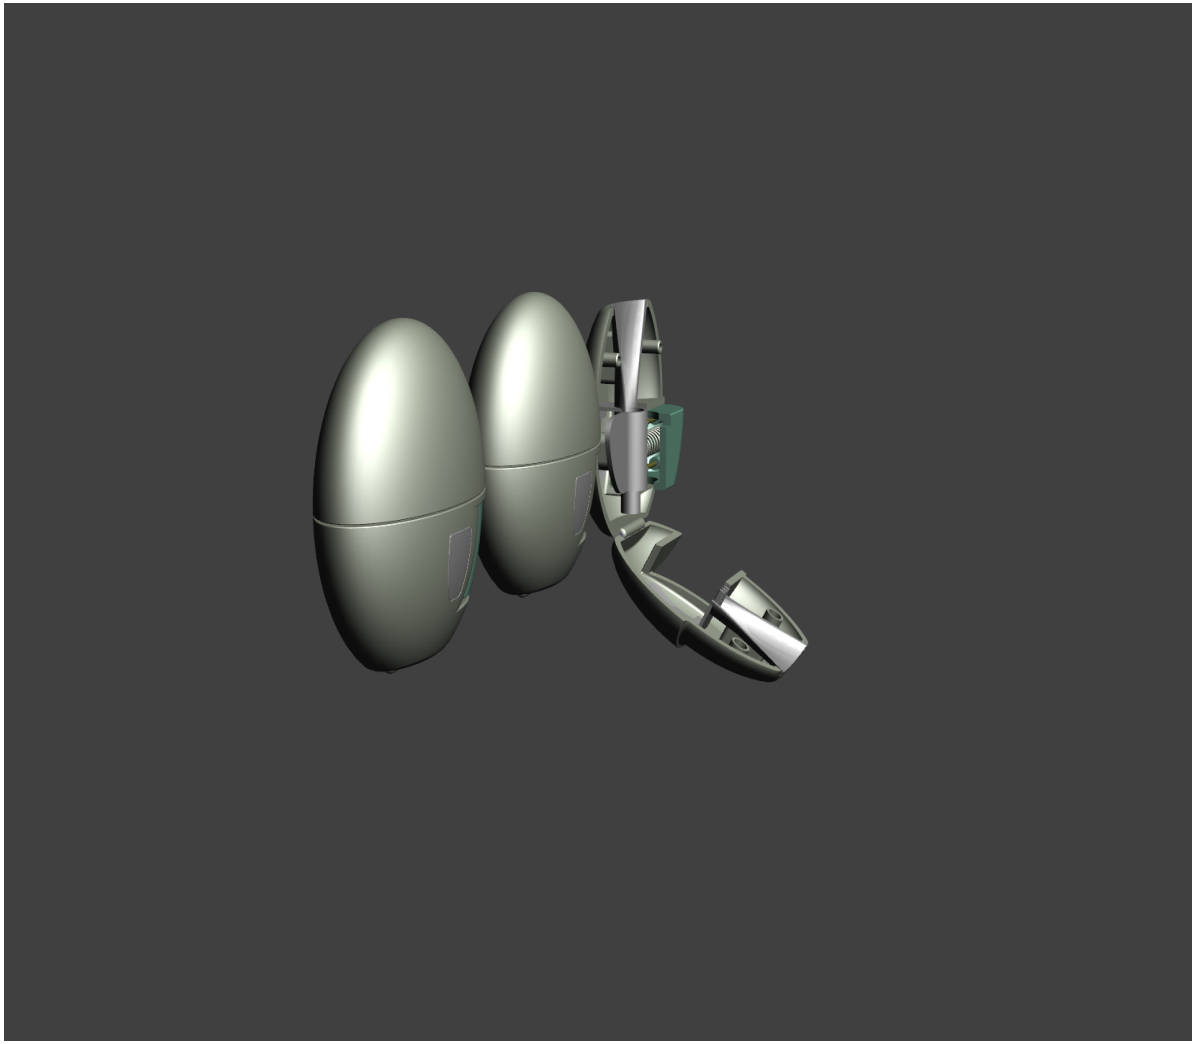

The generous 'chute' shape leading to the capsule chamber enables a partially able patient to drop the capsule onto the chute and slide down into the capsule chamber as the inhaler is tipped.

A mesh feature integrated onto the opening side of the device traps the capsule and also prevents the migration of any capsule debris that may be created as a result of the pierce pins breaking away any fragments of an inferior quality capsule.

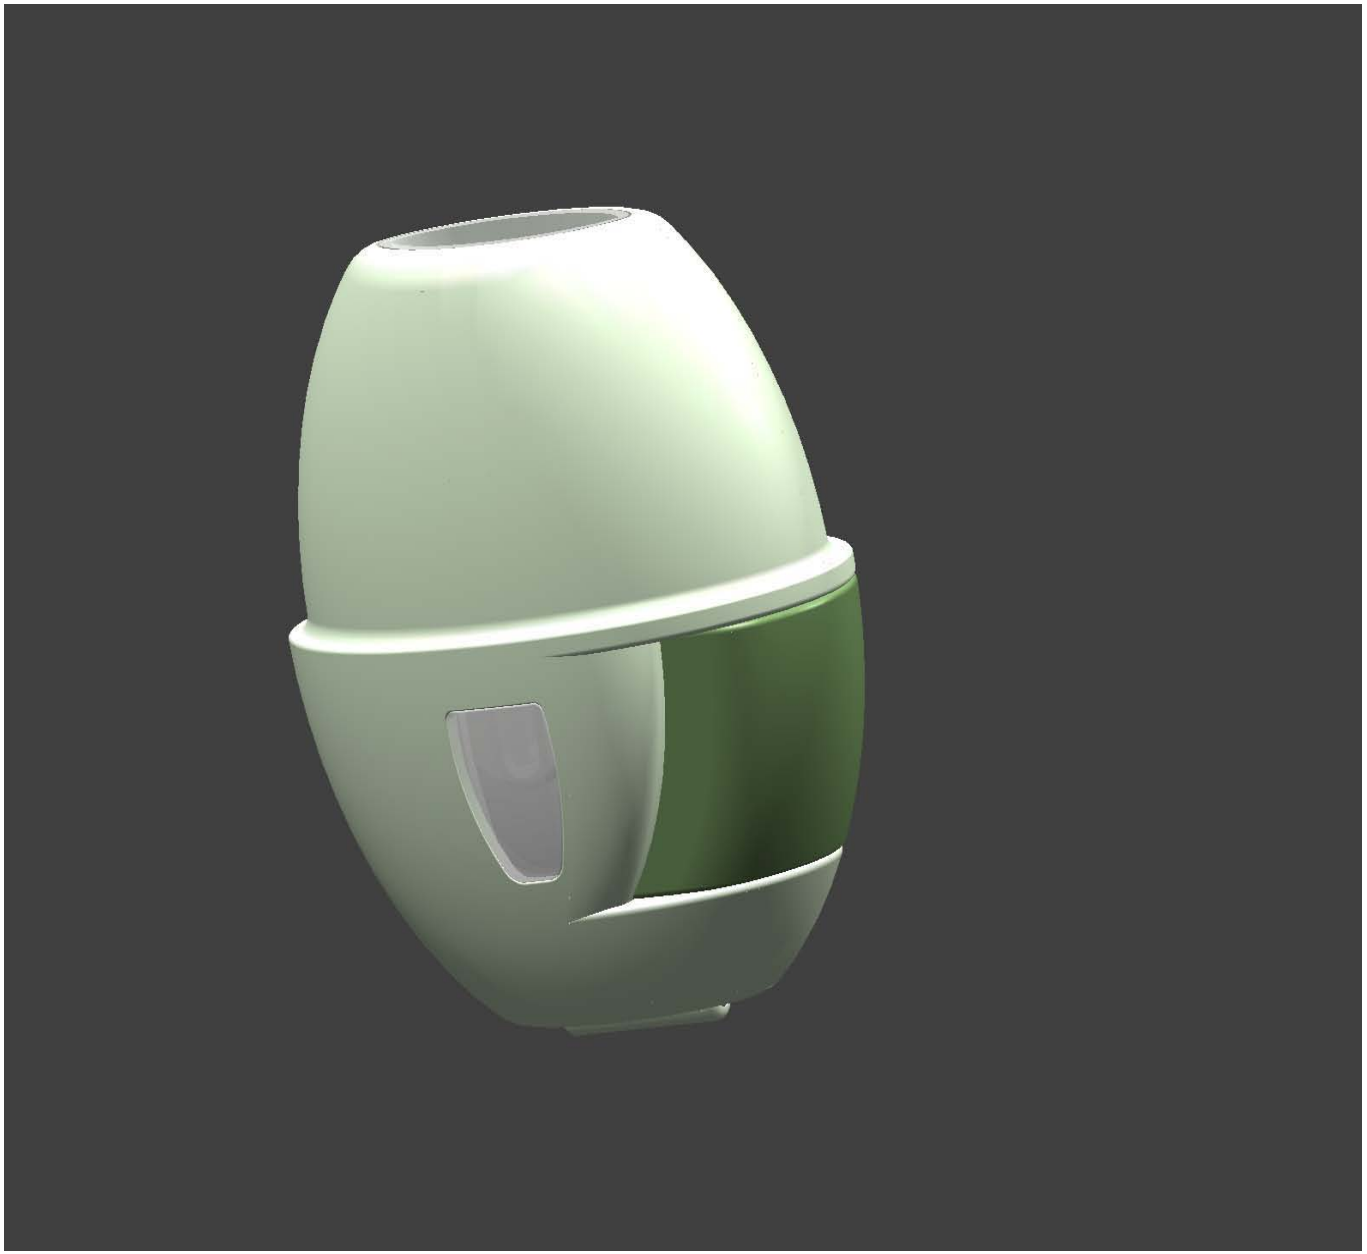

Pressing the side button pierces the capsule.

To reduce costs it will be possible to omit one of the pierce pins if regulatory restrictions allow.
